2. The application has been amended as follows:

In the abstract:

A wide-angle lens system includes a negative first lens group, and a positive second lens group, in this order from the object. The ~~negative first lens group and the positive second lens groups~~ are positioned so that the distance between the negative first lens group and the positive second lens group is set as the maximum distance in the wide-angle lens system. The wide-angle lens system satisfies the following conditions:

- | | |
|---------------------|-----|
| $2.0 < f_B/f < 2.5$ | (1) |
| $4.5 < f_1/f < 6.2$ | (2) |
| $1.8 < f_2/f < 2.0$ | (3) |
| $1.0 < d/f < 1.5$ | (4) |

wherein

f_B : the back focal distance of the wide-angle lens system; f : the entire focal length of the wide-angle lens; f_1 : the focal length of the negative first lens group; f_2 : the focal length of the positive second lens group; and d : the axial distance between the negative first lens group and the positive second lens group.

3. The following is an examiner's statement of reasons for allowance: Regarding claim 1, prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the dependent claims, in such manner that a rejection under 35 U.S.C 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claims, which include a wide-angle lens system satisfying the following conditions:

as claimed.
